

ATS Score: 85%

Matched Skills

Python, Flask, MySQL, SQL, Git

Missing Skills

Docker, Linux

Improvements

Experience: The 'Flask Intern' experience is well-described. To further strengthen it, consider adding metrics or specific examples of the REST APIs built and their functionalities. Quantifying the impact of your work (e.g., 'improved API response time by X%', 'handled Y number of requests') would be beneficial.

Skills: The skills section is well-organized. Consider adding a brief description or proficiency level for each skill to provide more context. For example, instead of just 'Python', you could say 'Python (Strong proficiency)'. Ensure all relevant skills mentioned in the job description are clearly listed, even if they are basic (like HTML/CSS).

Summary: While the summary is good, it could be more specific about achievements and quantify results where possible. For example, instead of 'building a fingerprint module system', mention specific features or outcomes. Also, consider adding keywords directly from the job description if they are relevant to your experience.
