

**ATS Score:** 90%

### ***Matched Skills***

Python, Flask, MySQL, Git, SQL

### ***Missing Skills***

Docker, Linux

### ***Improvements***

**Experience:** The experience section is currently very brief. While the project description elaborates, the formal experience entry should include more details about responsibilities, achievements, and the technologies used in a more structured format. Mentioning the specific contributions and impact made at Axilivo Technologies Pvt. Ltd. would strengthen this section.

**Skills:** The skills section is well-populated with relevant keywords. To further improve, consider adding specific libraries or frameworks within Python that are relevant to backend development (e.g., SQLAlchemy if used with Flask, although Flask-SQLAlchemy is implied). Also, explicitly stating "backend development" as a skill can be beneficial.

**Summary:** The summary is good, but could be enhanced by explicitly mentioning experience with backend development and API creation. It would also be beneficial to quantify achievements where possible.
